# ASSIGNMENT 6 — QUESTION 3

## Q3 - Bug Tracker: Callback to Promise Migration

JavaScript (ES6+) solution with comments

```
// Q3: Convert callback-based bug fetching to a Promise.

function getBugs() {
    return new Promise((resolve, reject) => {
        setTimeout(() => {
            const apiFailed = Math.random() < 0.3; // 30% chance of failure

            if (apiFailed) {
                reject(new Error("Bug tracker API request failed."));
            } else {
                resolve([
                    { id: 1, bug: "UI glitch" },
                    { id: 2, bug: "API timeout" },
                    { id: 3, bug: "Login failure" }
                ]);
            }
        }, 1000);
    });
}

getBugs()
    .then(bugs => {
        console.log("Bugs fetched successfully:");
        console.table(bugs);
    })
    .catch(error => {
        console.error("Unable to fetch bugs:", error.message);
    });
```
