ASSIGNMENT 1 — Q10

Citizen Eligibility Validator

JavaScript solution

```
// Q10: Citizen Eligibility Validator
"use strict";

const age = 20;
const isCitizen = true;
let eligibilityMessage;

if (isCitizen) {
    if (age >= 18) {
        eligibilityMessage = "Eligible for all services.";
    } else {
        eligibilityMessage = "Not eligible yet.";
    }
} else {
    if (age >= 18) {
        eligibilityMessage = "Only age criteria met.";
    } else {
        eligibilityMessage = "Not eligible yet.";
    }
}

// Note: the assignment's "Eligible to vote only" range (18–20)
// conflicts with "Eligible for all services" at age >= 18.
// This implementation follows the first rule as written.
console.log(eligibilityMessage);
```

Logic: Uses nested if-else for age and citizenship. The provided requirements overlap for citizens aged 18–20, so the code follows 'citizen and age ≥ 18' as the all-services rule.

How to test: Save this code as a .js file and run it with Node.js using `node filename.js`, or paste it into the browser console.
