ASSIGNMENT 1 — Q7

Smart Guessing Game (Number Range)

JavaScript solution

```
// Q7: Smart Guessing Game
"use strict";

const secretNumber = Math.floor(Math.random() * 50) + 1;
const userGuess = 27; // Change this test value to try different guesses.

if (userGuess === secretNumber) {
    console.log("Correct guess!");
} else {
    if (Math.abs(userGuess - secretNumber) <= 3) {
        console.log("Very close!");
    } else if (userGuess > secretNumber && userGuess >= 1 && userGuess <= 50) {
        console.log("Too high");
    } else if (userGuess < secretNumber && userGuess >= 1 && userGuess <= 50) {
        console.log("Too low");
    } else {
        console.log("Guess must be between 1 and 50.");
    }
}

console.log(`Secret number (for testing): ${secretNumber}`);
```

Logic: Generates a secret number from 1–50, checks equality, then checks whether the guess is within three.

How to test: Save this code as a .js file and run it with Node.js using `node filename.js`, or paste it into the browser console.
