ASSIGNMENT 5 — QUESTION 1

Callback Function

JavaScript (ES6+) solution

```
function showEndMessage() {
    console.log("Welcome to the course!");
}

function greetUser(name, callback) {
    console.log(`Hello ${name}`);
    callback();
}

greetUser("Mohit", showEndMessage);
```

Expected Output

```
Hello Mohit
Welcome to the course!
```

Explanation

greetUser() prints the greeting first, then calls the callback function passed as an argument. Here, showEndMessage is passed without parentheses so greetUser can execute it later.
