ASSIGNMENT 4

Q6: Employee Management System

Instructions: Save JavaScript-only solutions as `.js` files and run with Node.js. For form questions, save the full code as `.html` and open it in a browser. No frameworks are used.

Solution

```
class Employee {
  constructor(id, name, department, salary) {
    Object.assign(this, { id, name, department, salary }); // salary is monthly
  }
  getAnnualSalary() { return this.salary * 12; }
  applyBonus(percent) { this.salary += this.salary * percent / 100; }
}
const employees = [
  new Employee(1, "Asha", "IT", 50000),
  new Employee(2, "Ravi", "HR", 42000),
  new Employee(3, "Neha", "Finance", 48000),
  new Employee(4, "Arjun", "IT", 55000),
  new Employee(5, "Sara", "Sales", 40000)
];
employees[0].applyBonus(10);
employees.forEach(e => console.log(`${e.name}: annual salary ■${e.getAnnualSalary()}`));
const totalAnnualPayout = employees.reduce((sum, e) => sum + e.getAnnualSalary(), 0);
console.log("Total annual company payout:", totalAnnualPayout);
```

Expected result / testing

Run with Node.js. Annual salaries are monthly salary × 12; Asha receives a 10% bonus before totals are calculated.
