ASSIGNMENT 2 — Q1 — Scope Conflict Resolver

Instructions: Save this solution in its own .js file. Run it in Node.js or the browser console.

```
"use strict";
let bonus = 5000; // Global bonus

function calculateSalary(isPermanent) {
  const salary = 40000; // Local salary
  // Only permanent employees receive the global bonus.
  const totalSalary = isPermanent ? salary + bonus : salary;
  console.log(`Permanent: ${isPermanent}`);
  console.log(`Base salary: ■${salary}`);
  console.log(`Bonus: ■${isPermanent ? bonus : 0}`);
  console.log(`Total salary: ■${totalSalary}`);
}
calculateSalary(true);
calculateSalary(false);
console.log(`Global bonus remains: ■${bonus}`);
```

Explanation: bonus is global; salary is local to calculateSalary(). The isPermanent parameter controls whether the bonus is added. Changing local variables does not change the global bonus.
