ASSIGNMENT 2 — Q5 — Boolean Logic Access System

Instructions: Save this solution in its own .js file. Run it in Node.js or the browser console.

```
"use strict";
function checkSecurity(isDoorLocked, isWindowClosed, isAlarmOn, isOwnerInside) {
  const secure = isAlarmOn && isDoorLocked && isWindowClosed && isOwnerInside;
  console.log(secure ? "Secure" : "Unsafe");
  const warning = !isAlarmOn || !isDoorLocked || !isWindowClosed;
  if (warning || !isOwnerInside) console.log("Warning: check security conditions.");
}
checkSecurity(true, true, true, true);
checkSecurity(true, false, true, true);
checkSecurity(false, true, true, false);
```

Explanation: && requires all conditions to be true. ! reverses a Boolean value, and || produces a warning if any unsafe condition is present. Try different Boolean arguments.
