ASSIGNMENT 2 — Q7 — Customer Feedback Processor

Instructions: Save this solution in its own .js file. Run it in Node.js or the browser console.

```
"use strict";
const feedback = "Great product! Fast delivery and amazing sound quality!";
const words = feedback.trim().split(/\s+/);
const normalized = feedback.toLowerCase();
const hasNegativeWords = normalized.includes("bad") || normalized.includes("poor");
console.log(`Feedback: ${feedback}`);
console.log(`Word count: ${words.length}`);
if (!hasNegativeWords) console.log("Positive Feedback");
else console.log("Needs Improvement");
```

Explanation: split(/\s+/) counts words. includes() checks for bad or poor without case sensitivity because the feedback is converted to lowercase.
