ASSIGNMENT 2 — Q8 — Dynamic Discount Evaluator

Instructions: Save this solution in its own .js file. Run it in Node.js or the browser console.

```
"use strict";
const cart = [
  { item: "Laptop", category: "electronics", price: 45000 },
  { item: "Shoes", category: "fashion", price: 2500 },
  { item: "Book", category: "education", price: 600 }
];
const subtotal = cart.reduce((sum, product) => sum + product.price, 0);
let discountedTotal = 0;
for (const product of cart) {
  let rate = 0;
  if (product.category === "electronics") rate = 0.10;
  else if (product.category === "fashion") rate = 0.05;
  const finalPrice = product.price * (1 - rate);
  discountedTotal += finalPrice;
  console.log(`${product.item}: ■${finalPrice.toFixed(2)} after ${rate * 100}% discount`);
}
const extraRate = subtotal > 50000 ? 0.05 : 0;
const finalTotal = discountedTotal * (1 - extraRate);
console.log(`Subtotal: ■${subtotal.toFixed(2)}`);
console.log(`Extra overall discount: ${extraRate * 100}%`);
console.log(`Final total: ■${finalTotal.toFixed(2)}`);
```

Explanation: reduce() calculates the subtotal. Electronics gets 10% off, fashion 5%, education no category discount. If the original subtotal exceeds ■50,000, another 5% is applied to the discounted total.
