ASSIGNMENT 1 — Q3

Monthly Expense Tracker

JavaScript solution

```
// Q3: Monthly Expense Tracker
"use strict";

const expenses = {
    food: 4500,
    travel: 1200,
    rent: 8000,
    bills: 1800,
    leisure: 1000
};

let total = 0;
for (const amount of Object.values(expenses)) {
    total += amount;
}

const average = total / Object.keys(expenses).length;
const taxRate = 0.10;
total += total * taxRate;

console.log(`Base total: ■${(total / (1 + taxRate)).toFixed(2)}`);
console.log(`Average expense: ■${average.toFixed(2)}`);
console.log(`Final total after 10% tax: ■${total.toFixed(2)}`);
```

Logic: Adds the five categories, computes the average before tax, then applies 10% tax using an assignment operator.

How to test: Save this code as a .js file and run it with Node.js using `node filename.js`, or paste it into the browser console.
